S: STATISTICS AUSTRIA, EU-SILC 2020. Compiled on 29 April 2021. If the sample size is less than 200 households or persons the first and third quartiles (25%, 75%) are shown in brackets. - 1) Disposable household income per year. - 2) Equivalised household income is disposable household income divided by sum of person weights per household. Person weights are calculated according to the EU-scale: first person = 1.0; any other person 14 years or older = 0.5, children younger than 14 years = 0.3. Persons in households - 3) Households with pensions are those with 50% or more of their household income coming from old-age pensions.
