S: STATISTICS AUSTRIA, Regional Accounts. Compiled on 04 December 2020. - Consistent with National Accounts dated September 2020. - Concept: ESA 2010. - No compensation of any rounding differences. - 1) The Gross Regional Product (GRP) is the regional counterpart of the Gross Domestic Product (GDP); it is determined by Gross Value Added at basic prices plus taxes on products minus subsidies on products. Corresponding to the concepts of the European Union, the GRP is calculated by allocating the national Gross Domestic Product according to the regional Gross Value Added at basic prices. - 2) Resident population (annual average). - 3) According to the NUTS classification (hierarchically structured, standardised territorial classification used for compiling the European Union's regional statistics) the Austrian Länder correspond to NUTS 2 regions. NUTS is short for "Nomenclature des unités territoriales statistiques" or Nomenclature for Territorial Units for Statistics. - 4) Preliminary estimates. - 5) "Extra-Regio" refers to parts of the economic territory not directly allocable to a region (i.e. embassies abroad).
